BINDING

 · assent: sovereign assent · subject: vjs-v2-alpha-hardening

V2 alpha must harden predicate evaluation, repo scanning, invariant validation, permits, hooks before adding courts, Gazette, migration.

VJS V2 alpha must harden predicate evaluation, repo state scanning, invariant validation, permit enforcement, hooks, and tests before adding courts, Gazette, migration automation, or other features.

DIRECTIVE	ACTOR	MUST
D1	agent	implement predicate dsl
D2	agent	implement repo state scanner
D3	agent	wire invariants to validate
D4	agent	persist and close permits
D5	agent	install hooks on init
D6	agent	add golden tests

FORBIDDEN
expanding doctrine before invariant enforcement
adding gazette features before kernel validation
adding court of appeal before spine hardened
adding semantic search before kernel validation
adding pdf rendering before spine hardened

Harden the deterministic spine before expanding V2. No doctrine, courts, Gazette, or migration until invariants, permits, hooks, and tests are real.
