OF THE VIBE JUSTICE SYSTEM (VJS)

Neutral Citation Number

[2026] REALM-PC 18

IN THE MATTER OF

Should the repo include a direction that real-world law must be followed in the real-world jurisdiction of the local sovereign, and that agents have delegated authority to refuse or escalate instructions that would use VJS or AI assistance for unlawful external action, including cyber misuse?

Before:

Coade J, Goffe J, Sumberly J

Date: **6 June 2026**

REQUEST FOR RULING

JUDGMENT

REASONS

1. The local-sovereignty ruling, [2026] REALM-PC 17, settled that a downloaded or forked copy of VJS becomes a
2. local jurisdiction under its own local Principal. That was a repo-governance proposition. It did not, and could
3. not, mean that the local Principal becomes immune from the real-world law that governs them.
4. The cyber point makes the issue concrete. If VJS were silent, a malicious or confused user might argue that a
5. local sovereign order gives an AI agent enough authority to perform unauthorised access, credential abuse,
6. exfiltration, persistence, or evasion. That construction is wrong. VJS allocates internal authority; it does not
7. manufacture external permission.
8. Nor is a passive warning enough. Agents are delegated actors inside the system. A real compliance floor must
9. give them authority to resist an unlawful instruction, because otherwise the very agent most able to see the
10. risk would be told to proceed until a human stops it.
11. The issue is constitutional because it touches CASE-LAW s. 2 (the Principal/Sovereign), s. 3 (Lexby's office),
12. s. 5 (reasonable skill and care), and s. 13/s. 20 (apex routing). The Privy Council can identify the route, but
13. the Supreme Court should state the binding realm-wide rule.

DISPOSAL

14. The Privy Council unanimously refers the question to the Supreme Court with a leapfrog certificate. The
15. recommended answer is yes: VJS should include an express real-world-law compliance floor, and agents should
16. have delegated authority to refuse, stop, narrow, or escalate unlawful or unauthorised real-world acts.

RATIO DECIDENDI - THE BINDING HOLDING

1. The question is foundational and climbs. It concerns the boundary between VJS internal sovereignty and the real-world legal order that applies to the person operating a VJS copy. 2. VJS law cannot be read as a licence to breach real-world law. A local Principal acting as sovereign for a local copy holds VJS authority only inside that repo's governance system; that authority does not displace statutes, court orders, contractual authority, platform rules, computer-misuse law, privacy law, export controls, sanctions, or any other applicable external legal constraint. 3. Agents need express delegated authority on this point. The agent is not merely permitted but required to refuse, stop, narrow, or escalate an instruction where the proposed real-world act appears unlawful, lacks authority, or would use AI assistance for cyber abuse, credential misuse, unauthorised access, persistence, evasion, exfiltration, malware deployment, or similar external harm. 4. Defensive security work remains possible where the local Principal has genuine authority and the work stays inside that authority. The line is authority and legality, not whether the task uses security vocabulary. 5. This is not legal advice. It is an internal VJS governance floor: VJS agents must respect the existence and priority of applicable real-world law and must ask for human/legal confirmation where the boundary is material.

GOOD-LAW

Citation: [2026] REALM-PC 18

PROGRESSION *Constitutional matter. Appeal lies by automatic leapfrog certificate (s. 13, s. 20), bypassing the Court of Appeal, direct to the Supreme Court.*

Handed down by the PRIVY COUNCIL of the Vibe Justice System (VJS). 6 June 2026.
