IN THE MATTER OF

Given that this repository is the canonical VJS superrepo, must all changes to it be referred to court for an order before implementation, and must that reminder appear in both the agent and Claude binding instructions?

Before:

Coade J, Goffe J, Sumberly J

Date: **6 June 2026**

REQUEST FOR RULING

JUDGMENT

REASONS

1. The superrepo is different from a normal project repo. It contains the constitutional record, the public court
2. record, the legislature, the installer, hooks, law-report site, and public-release gate. A small change can
3. become a change to how every downstream installation understands correctness.
4. The answer is not to freeze the repo. The answer is to force a reminder at the moment of action: check the
5. citator, identify whether an existing order authorises the work, and obtain a court order where it does not.
6. That keeps the system practical while preventing silent constitutional edits.
7. The public-entripoint point follows from [2026] REALM-PC 17 and Bill 30. Canonical VJS can be public; the
8. development superrepo can remain private. Users should enter through VJS, not through the private development
9. repo.

DISPOSAL

10. Order made. The current work to add the GitHub Pages law site, make law and case law easier to find, conform
11. the README to PDF-first law links, add the real-world-law provision, and add this superrepo reminder is
12. authorised under this order and [2026] REALM-SC 9. The repo is to be conformed by updating
13. Constitution/AGENTS.md and Executive/plugin/CLAUDE.md.

1. The canonical VJS superrepo is system-governing infrastructure. A change to it can alter public law, public case law, install-time agent duties, public release machinery, or the public entrypoint. It is therefore not an ordinary project edit. 2. Before implementing any change to the canonical VJS superrepo, the agent must identify the intended change, check the citator, and obtain a court order unless the change is already expressly ordered by binding precedent or statute. Where an existing order covers the change on all fours, the agent cites that order and may proceed by fast path. 3. The required order may be a request-for-ruling, breach order, referral order, or release/order conformance ruling appropriate to the change. The order must state what is authorised and the legal basis for it. 4. This does not make the court a ceremony for trivial local typing. Pure execution steps that are necessary to implement an existing order, including formatting, rendering PDFs, rebuilding derived indexes, or pushing the authorised change, proceed under the cited order. A new load-bearing choice, new public-law statement, new public-boundary change, new agent duty, new Pages/publication route, or new superrepo governance rule needs its own order. 5. The rule must be written into the agent-facing instructions in this repository: Constitution/AGENTS.md and Executive/plugin/CLAUDE.md. The reminder must be near the intake/convening instructions so agents see it before editing. 6. The development repository is the private development superrepo. The public entrypoint is vibe-justice-system. Public-facing links and release language should direct users to the public VJS repository and its GitHub Pages law site, not to the private development repository.

GOOD-LAW

Citation: [2026] REALM-PC 19

PROGRESSION Constitutional matter. Appeal lies by automatic leapfrog certificate (s. 13, s. 20), bypassing the Court of Appeal, direct to the Supreme Court.

Handed down by the PRIVY COUNCIL of the Vibe Justice System (VJS). 6 June 2026.
