

Derived presentation rendered by the Gazette on 9 June 2026; the source of record is unchanged on the immutable v1 branch (Legislature/legislature/bills/32-computer-first-realm-act-2026.md).

The Computer-First Realm Act 2026 - Standing Committee Second Draft

Committee note (Clerk-Drafter)

This is the Standing Committee's SECOND DRAFT of Bill 32, the Computer-First Realm Act 2026, prepared by the Clerk-Drafter to give effect to the Supreme Court's settlement and express directions in **[2026] REALM-SC 10** and the Privy Council's reference in **[2026] REALM-PC 24**. It keeps the structure and good substance of the first draft and applies the eight directions and the CASE-LAW s. 23(1)-(6) floor as express provisions. On adoption by the Committee (which adoption is constitutive) and specific Sovereign assent against the final digest-pinned text, this text becomes the final bill presented for Royal Assent. Until then it is a **VOID FIRST DRAFT** of no binding runtime force ([2026] REALM-SC 8; [2026] REALM-PC 12; CASE-LAW s. 23(6)). The Committee's adoption is the source of the text's standing; the Sovereign's assent is the source of its force.

Correction made on the second drafting round. Following the members' memos on the first second-draft (the two nays agreed on a single adoption blocker, the rest of the draft giving faithful effect to the Supreme Court's eight directions and the CASE-LAW s. 23 floor), the Committee has cured that sole blocker. The prior draft cited the Bill 27 entrenchment-and-express-amendment lock as "Bill 27 s. 14(2)". That was wrong and load-bearing, because the savings clause's whole function is express-amendment-by-the-correct-number. Verified against Bill 27: s. 14 is "Scope of public realm record; local judgments privacy" and is NOT the entrenchment lock; s. 15 is "Amendment", and s. 15(2) is the lock ("The four-branch layout mandate (section 6) and the system-data-only rule (section 7) are foundational to CASE-LAW s. 1 and s. 9 and may not be silently repealed or relaxed by implication. Any amendment must be express."). [2026] REALM-SC 10 corrected this on its own motion to s. 15(2); [2026] REALM-PC 24 had carried the slip s. 14(2). The binding position is s. 15(2). Every reference to "Bill 27 s. 14(2)" (in section 24(4), this Committee note, and the drafting note carried into the record after section 24) has been replaced with **Bill 27 s. 15(2)** on this second drafting round, and every other cross-reference in the draft has been re-verified. No other substantive change is made: the SC's eight directions and the s. 23 floor remain faithfully effected.

What changed from the first draft:

1. **Commencement (Part 1, s. 2) fully redrafted** per Direction (1). The old five-limb conjunctive list (assent / validator / citation / entry / lock as co-equal operative conditions) is struck. Commencement is

now a strict ordered, external-then-compiled sequence: Royal Assent under the V1 route is the sole, wholly antecedent and external legitimating act; a named human-authorised act compiles the V2 carrier; lawpack validation, entry, and lock confirm form and digest-fidelity only. An express negative covenant states that no commencement condition is satisfiable by the V2 machinery alone. Commencement yields ONE checkable commencement record with exactly the four pinned facts (assent event, pinned digest, lawpack version, lock) plus one boolean self-satisfaction attestation, and no fifth ceremonial field. The s. 23(5) Assent-Source Invariant and the digest-bound assent linkage are both pinned here as distinct commencement conditions per Direction (8).

2. **New citation-scheme section (Part 1, s. 3)** per Direction (2): establishes the [YEAR] VJS-ACT N series, its form, the deterministic minting rule (the same highestN scan the citator runs), and express preservation of REALM-* citations as valid historical identifiers. The first-draft self-citation [2026] VJS-ACT 8 is DELETED from the masthead and from old s. 1(3) as a void self-mint; the Act's own ordinal is minted on the empty series at commencement (it evaluates to [2026] VJS-ACT 1).
3. **Express s. 24 savings clause** per Direction (3), preserving **Bill 27 s. 6** (four-branch mandate) and **Bill 27 s. 7** (system-data-only) for the public V1 estate by their correct section numbers, with the **Bill 27 s. 15(2)** express-amendment-by-number rule stated on the face. The PC 24 headnote shorthand "Bill 27 s. 1" is a slip (s. 1 is short-title territory) and is NOT carried into the operative text. The kernel-enforced `record_role` mechanism is named as the means by which the separation of powers survives the release of mandatory folder names.
4. **New court continuity / reconstitution Part (new Part 9A, ss. 25A-25B)** per Direction (4): carries the CASE-LAW s. 10 three-tier hierarchy and the s. 22(2) single apex into V2; requires a named constituting instrument fixing an odd bench (FI 1, CA 3, SC 5/9) and jurisdiction before any V2 order issues; recasts "no Court of Appeal in the MVP" as administrative non-convening of a persisting tier. s. 9 is cut back so it no longer purports to abolish the courts and is declared void to that extent; the s. 9 / s. 12 contradiction is resolved.
5. **s. 11 rank-floor and mandatory-kernel-effect gloss** per Direction (5): a lower-rank record may not incorporate V1 material of a rank it could not itself enact; kernel effect is a mandatory element of any valid incorporation; an un-incorporated-but-needed matter fails closed to a lawfully constituted bench, never to a default permit, and remains under V1 jurisdiction until a V2 bench exists.
6. **Single-Gazette principle kept (s. 26); publication mechanics moved out (s. 27 becomes an enabling clause)** per Direction (6). The export-gate fail-unless conditions descend to a Kernel Regulation, the enabling clause itself carrying the Part 12 Sovereign-assent declarations.
7. **s. 31 declaration fields made typed and kernel-evaluable** per Direction (7), with `assent_rule` and `competence_expansion` named in the kernel-checked prohibited-subjects set, and the standing-bounded ceiling aligned to **Bill 14 s. 12** (anti-Henry-VIII) and **s. 13** (carve-out) by number. It is stated expressly that the assent rule binds the delegate and never the Sovereign.
8. **Named fail-closed kernel-rejection invariant added (new s. 33, the Assent-Source Invariant)** per Direction (8), in affirmative allow-list form with the four rejection triggers, calling no model and

running no similarity search; cross-listed in s. 2 as a commencement condition together with the distinct digest-bound assent linkage. No deny-list / not-equal-to-self_authorized wording appears anywhere.

Further clean-codification fixes adopted from the members' memos: the Schedules are moved to follow the entire body so section numbering runs unbroken (Verity's structural defect); "CASE-LAW s. 23" is disambiguated from this Act's own s. 23 throughout (Verity's collision fix); operational machine-detail (the s. 5(2) operational-form menu and Schedule 3 required-fields) is reduced to a pointer to Kernel Regulation, the Act carrying constitutional commitment only (Aldous's restraint floor); a guardrail entrenchment clause is added (Marlowe); and a typed-vocabulary Schedule is added so the Clerk and the kernel author share one field vocabulary (Drummond). The 17 limits are confirmed AS VARIED by [2026] REALM-PC 24 (Limits 4, 5, 13 varied; 3 and 17 with riders) by single cross-reference, not re-enacted.

No em dashes or en dashes appear anywhere in this draft, by spaced hyphens, commas, parentheses, or separate sentences (PC 24 records the original prose was normalised for this reason).

The Declaration of the Realm as a Computer-First Legal System and V2 Supersession Act 2026

Short title: The Computer-First Realm Act 2026 **Citation:** Bill 32 (void first draft at this stage; V2 ordinal NOT YET MINTED, a non-operative placeholder pending deterministic mint on the empty VJS-ACT series at commencement per section 3) **Rank:** Constitutional Act (proposed) **Status:** VOID FIRST DRAFT pending Committee adoption and specific Sovereign assent. This second draft has no binding force until adopted by the Standing Committee (adoption being constitutive) and specifically assented to by the Sovereign against its final digest-pinned text ([2026] REALM-SC 8; [2026] REALM-PC 12; [2026] REALM-SC 10). Advance Sovereign assent does not cure void-first-draft status; it ripens only on specific assent recorded against the final, digest-pinned text (CASE-LAW s. 23(6)). **Settlement given effect:** [2026] REALM-SC 10 (directions (1) to (8) and the Express Handover Order); [2026] REALM-PC 24 (the eight defined questions and the seventeen limits as varied: Limits 4, 5, and 13 confirmed as varied, Limits 3 and 17 confirmed with riders). **Constitutional floor carried:** CASE-LAW s. 23(1) to s. 23(6) [constitutional]. **Enacted by:** Pending specific Sovereign assent (Royal Assent) under the V1 route. **Drafted by:** Lexby as void first draft; redrafted to second-draft stage by the Standing Committee's Clerk-Drafter. **Adopted by:** Pending Standing Committee adoption (constitutive). **Date:** 2026-06-09

Note on cross-references. Two distinct provisions numbered "s. 23" are in play. "CASE-LAW s. 23" means the enacted constitutional article s. 23(1) to (6) settled by [2026] REALM-SC 10. "This Act s. 23" means the Transitional-effect section of this Act in Part 9. They are never to be conflated by a reader or by the kernel. Where this Act gives effect to the constitutional floor, it cites CASE-LAW s. 23 by name.

Long title

An Act to declare VJS V2 to be a computer-first legal system; to adopt the VJS V2 Constitutional Migration Charter as the constitutional settlement of the transition from V1 to V2; to supersede the V1 legal system as live governing law while preserving V1 as Gazette, Archive, historical record, and migration evidence; to establish the V2 lawpack as the runtime authority surface; to require future law to be introduced, validated, adopted, cited, and entered through machine-checkable records; to redraft the commencement sequence so that Royal Assent is wholly antecedent and external and no commencement condition is satisfiable by the V2 machinery alone; to establish the VJS-ACT citation series; to preserve the four-branch mandate of the public V1 estate; to carry the entrenched court structure into V2 subject to express constitution of each bench; to carry the constitutional assent floor of CASE-LAW s. 23 into V2; to provide a named fail-closed kernel-rejection invariant; and for connected purposes.

Preamble

WHEREAS VJS V1 began as a case-law-first constitutional experiment, and through that experiment discovered doctrines, duties, procedures, court structures, legislative forms, agent obligations, public and private boundaries, and modes of authority;

AND WHEREAS V1 then built legislation, statutory instruments, judgments, law reports, ledgers, and a Gazette around those discoveries, a record that is valuable and shall not be destroyed, erased, or treated as error merely because the Realm has learned from it;

AND WHEREAS the same record has shown that long-form judgments, expansive legislative prose, ceremonial machinery, and archive-scale context are not fit as the ordinary runtime surface for AI-assisted engineering work;

AND WHEREAS V2 has been founded to preserve the learning of V1 while replacing its live runtime burden with compact, schema-valid, machine-checkable law;

AND WHEREAS the Privy Council in [2026] REALM-PC 24 and the Supreme Court in [2026] REALM-SC 10 have settled the constitutional terms of the migration, enacted CASE-LAW s. 23(1) to (6), and directed the form this Act must take;

AND WHEREAS the Realm declares that its live legal system shall be computer-first, not computer-only: human meaning remains necessary and remains the source of legitimacy, but live operation shall be carried by records that a deterministic kernel can load, validate, route, and enforce;

AND WHEREAS Royal Assent under the V1 route, recorded against the final pinned text of this Act and bound by a deterministic link to its digest, is the sole source of this Act's legitimacy, and is wholly antecedent to and external from the V2 machinery, which never certifies its own warrant;

BE IT THEREFORE ENACTED by the Sovereign of the VJS Realm, on the constitutive adoption of this second draft by the Standing Committee and specific Royal Assent against its final digest-pinned text, as follows.

Part 1 - Preliminary

1. Short title and citation

1. This Act may be cited as **The Computer-First Realm Act 2026**.
2. Its full ceremonial title is **The Declaration of the Realm as a Computer-First Legal System and V2 Supersession Act 2026**.
3. Its neutral citation in V2 form is **not assigned in this text**. The Act's ordinal in the VJS-ACT series is minted deterministically on the empty series at commencement under section 3 and is never hand-numbered. Any reference in working papers to "[2026] VJS-ACT 8" is a non-operative placeholder only and is of no effect; it does not assign an ordinal.
4. It is a constitutional Act of VJS V2.

2. Commencement

1. **Royal Assent is the sole and antecedent source of legitimacy.** Royal Assent to this Act, given by the Sovereign under the V1 route and recorded against the final, pinned text adopted by the Standing Committee, bound by a recorded deterministic link to the digest of that text, is the sole source of this Act's legitimacy. That assent is wholly antecedent to and external from the V2 machinery. Assent is an input to commencement; it is never a step the V2 machinery performs or certifies.
2. **A named human-authorised act compiles the carrier.** After Royal Assent, a recorded human-authorised act brings the V2 lawpack infrastructure into existence as the compiled and validated carrier of the already-assented settlement. That act is performed by an authorised human officer and is recorded; it does not itself confer legitimacy, which is supplied solely by the assent under subsection (1).
3. **Validation, entry, and lock confirm form and digest-fidelity only.** Lawpack validation, entry into the V2 lawpack, and inclusion in the current lawpack lock follow in that order and confirm form and digest-fidelity only: that is, that the lawpack content hashes to the pinned assent digest and satisfies the schema. They confirm nothing about the legitimacy or validity of this Act, and in particular they never certify that the kernel validated the Act into existence.
4. **Anti-self-warrant covenant.** No commencement condition in this section is satisfiable by the V2 machinery alone. The kernel never certifies its own warrant. No commencement field may be derived by the kernel from the lawpack itself; the assent event identifier and the assent digest are populated from

outside the kernel, from the V1 Royal Assent act and its recorded digest, and the kernel is structurally incapable of writing them from its own computation.

5. **The single commencement record.** Commencement is complete only upon, and is evidenced solely by, a single checkable commencement record in the typed form:

```
{ assent_event_id: string, assent_digest: string (sha256 hex of the final adopted text), lawpack_version: string, lock_id: string, v2_machinery_self_satisfied: false }
```

The record names exactly the assent event, the pinned digest, the lawpack version, and the lock, together with the boolean attestation that no condition was self-satisfied by the V2 machinery, and no further field. The kernel reads this Act as in-force only when that record exists, validates, and `v2_machinery_self_satisfied` is `false`. Before that record exists and validates, this Act has the status *prospective* (assented, not commenced) and has no binding runtime force.

1. **Commencement conditions of the guardrails.** Both of the following are commencement conditions of this Act, distinct and not collapsible into one:
2. the existence and passing of the Assent-Source Invariant (section 33), proven against (i) a record with a missing `assent_source` and (ii) a record with an unresolved assent trace, both rejected, in the manner the citation-integrity gate fails closed on a duplicate; and
3. the digest-bound assent linkage (section 33A): a specific Sovereign-assent event bound by a recorded deterministic link to the digest of the final adopted text.
4. This section is entrenched under section 34.

3. The VJS-ACT citation series

1. **Series code.** The citation series for primary Acts of V2 is `VJS-ACT`.
2. **Form.** A citation in the series has the form `[YEAR] VJS-ACT N`, where `YEAR` is the calendar year of the Act and `N` is a positive integer.
3. **Deterministic minting rule.** `N` is minted deterministically as one greater than the highest `N` already issued in the `VJS-ACT` series for that year (the same `highestN` scan the citator engine runs, `Executive/cli/lib/citation.js`). It is never hand-numbered, hand-asserted, or self-assigned. The deterministic citation-integrity gate (CASE-LAW s. 19(5)) fails closed on any duplicate or non-deterministic number.
4. **This Act's own ordinal.** This Act's own ordinal is minted on the empty `VJS-ACT` series at commencement and, on the empty series for the year 2026, evaluates to `[2026] VJS-ACT 1`. It is not assigned by this text; the scheme-establishing limb takes effect at commencement and the engine mints the ordinal at that point.
5. **Preservation of REALM-* identifiers.** Existing `REALM-*` citations (and all prior V1 neutral citations) are preserved as valid historical identifiers, are not renumbered, and continue to identify the records

they identify.

6. This is a scheme-establishing provision, not a citation manual.

4. Interpretation

In this Act:

1. **V1** means the first generation of the Vibe Justice System, including its case-law settlement, Acts, statutory instruments, judgments, court hierarchy, Gazette, law reports, ledgers, ministries, directories, procedures, and associated records.
 2. **V2** means the second generation of the Vibe Justice System founded by the V2 Migration Charter and implemented through the compact lawpack and the deterministic kernel.
 3. **The Charter** means the VJS V2 Constitutional Migration Charter.
 4. **Computer-first legal system** means a legal system whose live operational law is expressed in compact, schema-valid, machine-checkable records capable of deterministic validation and application by the kernel.
 5. **Lawpack** means the compact body of V2 constitutional law, statutes, regulations, rule atoms, court orders, specs, decisions, invariants, permits, proofs, logs, and related authority records loaded by the kernel.
 6. **Kernel** means the deterministic VJS clerk that loads valid records, resolves authority, evaluates invariants, returns route decisions, and records proofs, and that calls no model and performs no similarity search.
 7. **Runtime authority** means authority that the kernel may apply to determine what an agent, repo, or jurisdiction must, may, or must not do.
 8. **Archive authority** means historical, explanatory, evidential, or migration material that may be cited but does not bind V2 unless expressly incorporated.
 9. **Express incorporation** means incorporation by a V2 Act, Kernel Regulation, Rule Atom, Court Order, Spec, Decision, or Invariant using a valid record identity, an authority basis, and a stated kernel effect.
 10. **assent_source** means the typed property by which a record carries the trace of the Sovereign assent on which it relies, evaluated by the Assent-Source Invariant (section 33).
 11. **record_role** means the typed, closed-enum field carried by every V2 runtime record by which the kernel enforces the separation of powers (section 24).
 12. **CASE-LAW s. 23** means the enacted constitutional article s. 23(1) to (6); it is not this Act's own s. 23.
-

Part 2 - Declaration of the computer-first Realm

5. The Realm declared computer-first

1. VJS V2 is hereby declared to be a **computer-first legal system**.

2. The live law of the Realm shall be expressed through records capable of deterministic operation by the kernel.
3. The purpose of this declaration is to ensure that agents receive bounded, executable instructions rather than archive-scale legal context.
4. The Realm remains intelligible to humans, and human meaning remains the source of legitimacy; its ordinary runtime force is carried through validated machine-readable records.

6. Meaning of computer-first

1. Computer-first does not mean that human language is abolished.
2. Computer-first means that the operative effect of law must be capable of being represented in a machine-checkable operational form.
3. The canonical, closed schema of operational forms (authority rank, route rule, permission, prohibition, obligation, invariant, proof requirement, court trigger, citation or status rule, supersession relationship, public/private boundary rule, directory role, log requirement, permit condition, and any further forms) is set by a Kernel Regulation made under section 27A. This Act carries the principle; the machine-detail menu is operational form for the Regulation, not constitutional commitment frozen in primary law.
4. A provision that cannot be expressed in any operational form may remain commentary, but it shall not by itself be part of the kernel's runtime decision surface.
5. The kernel shall prefer structured law over long-form explanation.

7. Concordance of ceremonial and computer language

1. The ceremonial text of a V2 law states its constitutional meaning; its computer language states its operational runtime effect.
2. A law is valid for runtime use only where its ceremonial meaning and computer effect are in concordance.
3. Where a material discrepancy appears between ceremonial text and computer language:
 4. the discrepancy is a validation defect;
 5. the kernel shall not silently choose either form;
 6. the conflicting provision shall be routed for correction; and
 7. no agent may rely on the discrepancy to create authority.
8. Rendered Markdown, web pages, PDFs, or Gazette pages are explanatory unless the lawpack record expressly makes them canonical.

Part 3 - Adoption of the Migration Charter

8. Adoption of the Charter

1. The VJS V2 Constitutional Migration Charter is hereby adopted as the constitutional migration settlement of the Realm.
2. The Charter has force as the founding instrument of transition from V1 to V2.
3. The Charter is subject to this Act, the V2 Constitution, and later valid V2 constitutional enactment.
4. The Charter shall be preserved in the V2 repository and may be published by the V1 Gazette and Archive.

9. Legal effect of the Charter; what supersession does and does not reach

1. The Charter is declared to have superseding force over V1 for all live V2 runtime purposes.
 2. The Charter does not destroy V1 and does not erase V1 citations, judgments, Acts, instruments, or learning.
 3. The Charter fixes the boundary between V1 as historical and evidential archive and V2 as live computer-first runtime law.
 4. Where V1 substantive runtime law conflicts with the Charter or this Act, the Charter and this Act prevail for all V2 purposes.
 5. **Saving of the entrenched court structure (Direction 4).** Supersession under this Act, and in particular section 10, does NOT reach, and is void to the extent it would purport to reach or abolish, the CASE-LAW s. 10 three-tier court hierarchy or the single central apex of s. 22(2), which survive supersession automatically and are carried into V2 by Part 9A. The reference in section 10 to the supersession of the "V1 Court of Appeal" means the supersession of V1 substantive law as a live runtime source, and the administrative non-convening of that tier in the V2 MVP; it is NOT an abolition of the tier, which persists in law and may be abolished only by express amendment of CASE-LAW s. 10 citing it by number, not made here.
-

Part 4 - Supersession of V1 as live law

10. Supersession of V1

1. The V1 legal system is superseded as the live governing law of VJS for runtime purposes, subject to section 9(5).
2. Supersession includes, without limitation:
3. the V1 case-law settlement as a runtime source (its entrenched articles excepted per section 9(5));
4. the V1 Acts as live runtime law;
5. the V1 statutory instruments as live runtime law;
6. V1 procedural machinery as ordinary runtime process;
7. the V1 ministry directory structure as mandatory V2 runtime structure (subject to section 24 and the savings for the public V1 estate);
8. V1 law-report projections as runtime sources;

9. V1 Gazette records as runtime sources;
10. V1 agent hook prose as runtime instruction.
11. **The V1 court hierarchy and the Court of Appeal are NOT abolished by this section.** This section does not supersede, suspend, or abolish the CASE-LAW s. 10 hierarchy or the s. 22(2) apex, which are carried into V2 by Part 9A; it is void to the extent it so purports. The former first-draft sub-limbs that listed "the V1 court hierarchy" and "the V1 Court of Appeal" as superseded are struck and replaced by this subsection and by section 9(5).
12. No V1 authority binds V2 merely because it exists in the archive; no V1 rule is imported by implication.

11. V1 incorporation rule

1. V1 material has live V2 force only if expressly incorporated.
2. Express incorporation may be made only by a V2 Act, V2 Kernel Regulation, V2 Rule Atom, V2 Court Order, V2 Spec, V2 Decision, or V2 Invariant. This list of vehicles is closed.
3. **Mandatory elements of a valid incorporation.** An incorporation must identify the V1 source, the V2 destination, the operative rule being carried forward, and any supersession or variation, AND must state a **kernel effect**. The kernel effect is a mandatory element. An incorporation that does not state a kernel effect is invalid, confers no runtime force, is excluded from the runtime authority graph, and is archive prose only.
4. **Rank-floor (Direction 5).** A V2 record may not incorporate V1 material of a rank the incorporating record could not itself enact. A lower-rank record may not incorporate higher-rank V1 material; constitutional or primary-Act-level V1 material may be incorporated only by a V2 Act of the corresponding rank.
5. **Fail-closed-to-a-route on a gap (Direction 5).** Where a needed matter is not incorporated, the matter routes to a lawfully constituted V2 bench (Part 9A), failing closed to a route. It does NOT default to a permit. Until a competent V2 bench is constituted, the matter remains under V1 jurisdiction; there is no jurisdictional vacuum and no phantom forum.
6. A general reference to V1, or a citation to V1 for history, evidence, or explanation, is not incorporation.

12. V2 authority hierarchy

1. The V2 authority hierarchy is, from highest to lowest:
2. the real-world-law floor ([2026] REALM-SC 9; [2026] REALM-PC 18), non-derogable;
3. the V2 Constitution and the entrenched articles carried from CASE-LAW (including s. 10, s. 22(2), and s. 23);
4. V2 constitutional Acts;
5. V2 primary Acts;
6. valid Kernel Regulations;
7. orders of expressly constituted V2 courts (Part 9A), in the order of the s. 10 tiers;
8. local decision logs;

9. V1 archive material, only if expressly incorporated under section 11.
 10. The kernel shall apply this hierarchy when resolving runtime authority; a lower authority may not contradict a higher authority; a local log may record practice but may not amend law.
 11. The references in this section to orders of V2 courts are contingent on the express constitution of the issuing court under Part 9A. An order from an unconstituted V2 bench is void ab initio and the kernel shall reject it.
-

Part 5 - The kernel and the lawpack

13. The kernel as clerk

1. The kernel is the deterministic clerk of the computer-first Realm.
2. The kernel may load the lawpack, validate records, resolve authority, issue bounded route decisions, identify court triggers, evaluate invariants, record permits, record proofs, validate logs, and report public/private boundary findings.
3. The kernel may not legislate, adjudicate as a court, create legal force by computation alone, call a model, search by semantic similarity to determine binding authority, or treat archive material as live law without incorporation.
4. The kernel's output is evidence of the route and state of a record; it does not replace the lawful source of authority. The source of force is always the assenting organ, never the artefact and never the kernel.

14. The lawpack as runtime authority surface

1. The V2 lawpack is the ordinary runtime authority surface of the Realm; agents shall use the lawpack through the kernel.
2. The lawpack shall contain compact, schema-valid records and shall not require agents to read long-form V1 judgments, Acts, SIs, or Gazette pages to perform ordinary governed work.
3. The lawpack lock records the version and digest of the lawpack in force for a jurisdiction.

15. Runtime record types

1. V2 runtime law and governance may be carried by Constitution, Act, Kernel Regulation, Rule Atom, Court Order, Spec, Decision, Invariant, Permit, Proof, or Log. Each runtime record carries a typed `record_role` (section 24).
 2. Opinions, reasons, commentary, Gazette pages, and rendered documents may assist understanding; they are not runtime law unless their operative content appears in a valid runtime record.
-

Part 6 - Lawmaking after the declaration

16. Future lawmaking route

1. After commencement, new V2 law must be introduced through the V2 lawmaking route: proposal or authority basis; draft record; schema validation; authority validation; public/private boundary validation; deterministic citation; authorised adoption; lawpack entry; lawpack lock update; decision log.
2. Primary Acts require specific Sovereign assent. Kernel Regulations require authority from an Act and valid adoption under that authority (a standing-bounded route, Part 12).
3. Draft text has no binding force until the required route is complete and a valid assent source resolves under section 33.

17. Form of future legislation

1. The canonical operational form of future V2 legislation is schema-valid computer language; human-readable ceremonial form may be rendered from, attached to, or published with that record.
2. The canonical schema of required record properties is set by Kernel Regulation made under section 27A. A legislative record that lacks a kernel effect shall not be included in the runtime authority graph.

18. Amendment and supersession

1. V2 law is append-only; amendment is made by a new valid record stating whether it adds, varies, corrects, supersedes, revokes, preserves, or incorporates.
2. The old record remains visible; supersession must be explicit. Silent repeal, implied importation from V1, and unrecorded amendment are prohibited.

Part 7 - Principal, Lexby, and lawful authority

19. The Sovereign

1. The Sovereign is the human legitimacy source of the local VJS jurisdiction and retains the full CASE-LAW s. 2 power to make or unmake any law by due process, and the express, unconditional, at-will override of Bill 14 s. 21.
2. The Sovereign may assent to legislation, set objectives, give policy direction, authorise external acts, approve local sovereignty changes, request a court route, and approve migration records.
3. The Sovereign may not make unlawful real-world conduct lawful, authorise credential misuse, force public disclosure of private facts, turn Lexby into the judge, or silently bypass the record.
4. The assent rule (Part 12) binds the delegate and the agent, and never the Sovereign.

20. Lexby

1. Lexby may act as Advocate, Advisor, Engineer, and officer respecting the Court, and may propose, draft, argue, ship, log, and file.
 2. Lexby may not be the source of legal force, may not sit as the bench, and may not treat his own draft as binding law unless adopted through the lawful route. Lexby's instrument text is a void first draft only until constitutive adoption by the proper organ and specific Sovereign assent ([2026] REALM-SC 8; [2026] REALM-PC 12).
-

Part 8 - Public, private, and real-world boundaries

21. Public and private boundary

1. The computer-first Realm preserves the V1 learning that public records carry system data, not unredacted private facts.
2. Public V2 records must not contain secrets, tokens, credentials, private hostnames, identifying private repo facts, client or personal facts, unredacted operational evidence, or screenshots or logs containing private material.
3. Private evidence belongs in the configured private record area; public records may include redacted summaries where necessary.

22. Real-world law

1. Nothing in this Act authorises unlawful real-world conduct, including unauthorised access, credential misuse, evasion, exfiltration, malware, unlawful publication, or breach of duties owed outside VJS.
 2. An agent may refuse, stop, narrow, or escalate an instruction that appears unlawful or unauthorised.
 3. The real-world-law floor ([2026] REALM-SC 9; [2026] REALM-PC 18) is non-derogable and remains within the ultimate supervision of the canonical apex (s. 22(2)).
-

Part 9 - Transitional and saving provisions

23. Transitional effect

1. From commencement, V2 runtime work shall use the V2 lawpack and kernel; V1 remains available as Gazette and Archive.
2. Existing V1 citations remain valid historical identifiers (and see section 3(5)).
3. Existing V1 material may be migrated only through express incorporation (section 11).
4. No agent shall rely on V1 as binding merely because no V2 rule has yet been written; a gap fails closed to a route under section 11(5), not to a permit.

24. Directory structure and the record-role mechanism

1. **Confined scope.** This section governs only V2 internal runtime record organisation. V2 does not carry forward the V1 four-branch ministry directory structure as mandatory V2 runtime folder structure.
2. **The kernel-enforced record-role mechanism.** Separation of powers in V2 is enforced not by mandatory directory names but by a typed `record_role` field carried on every runtime record. `record_role` is a closed enumeration. The kernel enforces the separation of powers off that field by an always-on, deterministic, lexical check in the style of the bench-name scan (`Executive/cli/lib`), calling no model. Each runtime record is bound by its configured role, schema, id, status, authority basis, and kernel effect, not by its path; a path name does not create legal force.
3. **Express savings clause (Direction 3).** Nothing in this section amends, displaces, or relaxes **Bill 27 s. 6** (the four-branch directory mandate) or **Bill 27 s. 7** (the system-data-only rule), which continue to bind the public V1 estate. The public V1 super-repo remains four-branch under Bill 27 for as long as it is the public-facing estate and continues to publish into the single Gazette.
4. **Express-amendment-by-number rule.** Release of the public V1 estate from the four-branch mandate would require express amendment of Bill 27 by section number, under **Bill 27 s. 15(2)** (which entrenches s. 6 and s. 7 against silent repeal or relaxation by implication and requires that any amendment be express). This Act makes no such amendment. The relationship is foreclosed both ways: s. 24 releases only the V2 internal runtime folder names; Bill 27 s. 6 and s. 7 are preserved untouched for the public estate.

Drafting note carried into the record. [2026] REALM-PC 24 repeatedly cites the four-branch mandate as "Bill 27 s. 1." That is a headnote slip: Bill 27 s. 1 is short-title and citation territory. The authoritative Bill 27 places the four-branch mandate at s. 6, the system-data-only rule at s. 7, and the express-amendment entrenchment at s. 15(2). Bill 27 s. 14 is "Scope of public realm record; local judgments privacy" and is NOT the entrenchment lock; the lock is s. 15 ("Amendment"), s. 15(2). [2026] REALM-SC 10 corrected the entrenchment citation on its own motion to s. 15(2); [2026] REALM-PC 24 had carried the slip s. 14(2). This second draft uses the correct numbers (s. 6, s. 7, s. 15(2)) and does not propagate either the apex "s. 1" slip or the "s. 14(2)" slip into the enacted text.

25. Saving of archive honour

1. Nothing in this Act shall be read as finding V1 worthless, void, unlawful, or mistaken in its historical context.
2. V1 is honoured as the record that discovered the V2 settlement. The Realm's formula is: **V1 discovered the law. V2 compiles it.**

Part 9A - Court continuity and reconstitution

25A. Carriage of the entrenched court structure into V2

1. The CASE-LAW s. 10 three-tier court hierarchy (First Instance, Court of Appeal, Supreme Court) and the single central apex of CASE-LAW s. 22(2) are carried into V2 and survive supersession automatically.
2. The s. 12 authority hierarchy, insofar as it assumes orders of V2 courts, is aspirational until the relevant court is expressly constituted under section 25B.
3. Bill 32 s. 9 and s. 10 are void to the extent they purport to abolish the hierarchy or the apex (section 9(5), section 10(3)).
4. The Court of Appeal tier persists in law. It is administratively non-convened in the V2 MVP (no appeal having yet arisen to convene it); this is non-convening of a persisting tier, not abolition. The tier may be abolished only by express amendment of CASE-LAW s. 10 citing it by number, not made here.

25B. Express constitution of each V2 court before any order issues

1. No V2 court may issue an order until it is expressly constituted or reconstituted by a named constituting instrument.
2. A constituting instrument must record a checkable constitution record in the typed form:

```
{ court_id: string, constituting_instrument_id: string, bench_size: integer in {1, 3, 5, 9}, jurisdiction: typed scope }
```

fixing the court's odd deciding bench (First Instance 1, Court of Appeal 3, Supreme Court 5, expandable to 9 for constitutional or foundational matters: CASE-LAW s. 10, s. 18) and its jurisdiction. 3. The question "is this court constituted?" is a deterministic record lookup the kernel runs before admitting any order. An order whose issuing court has no valid constitution record, or whose `bench_size` is not in {1, 3, 5, 9}, is void ab initio (CASE-LAW s. 18(5)) and the kernel shall reject it. 4. Until a given V2 bench is lawfully constituted, jurisdiction over that matter remains with V1; there is no jurisdictional vacuum and no phantom forum.

Part 10 - The single Gazette

26. The single Gazette (principle)

1. There shall be one VJS Gazette, preserving and publishing the public legal thread of the Realm across V1 and V2.
2. The Gazette has two estates: the V1 Archive estate (the preserved public records of V1) and the V2 Current estate (the published records of the computer-first Realm).
3. **Publication is not force.** Publication in the Gazette does not itself create runtime force. V1 records derive their force, if any, from V1; V2 records derive their force from the V2 lawpack, valid adoption route, and a valid assent source recognised by the kernel.
4. Publication of V2 material in the Gazette is not enactment by V1 and is not incorporation into V1; it is a public record act of the single Gazette.

5. A V2 Gazette entry that supersedes, preserves, incorporates, or derives from V1 material must declare the relationship using typed lineage edges.
6. The V2 kernel does not depend on reading the Gazette for runtime decisions; the V2 runtime force source remains the V2 lawpack, not the Gazette.

27. Enabling clause for the Gazette publication mechanics (Kernel Regulation)

1. The Gazette publication mechanics are not frozen in this Act. They are prescribed by a Kernel Regulation made under this section. The single-Gazette principle and the "publication is not force" rule (section 26) remain in this Act; the mechanics descend to the Regulation.
2. The mechanics so prescribed include the export packet, the manifest, the rendered public views, the redaction report, the validation report, the lawpack-digest binding, and the fail-unless export gate.
3. **Preserved fail-closed export gate (Limit 9).** The Regulation shall preserve, as hard fail-closed conditions, that the export command fails unless: the lawpack validates; the public/private scan passes; record statuses are valid; citations are unique; lineage edges resolve or are explicitly external; and the manifest includes the lawpack digest. These conditions are relocated to the Regulation, not dropped.
4. **This enabling clause is a standing-bounded route and carries the Part 12 declarations:**
5. **maker:** this Act, by this section;
6. **scope:** [gazette_publication_mechanics] only;
7. **prohibited_subjects:** a closed set that includes **assent_rule** and **competence_expansion**;
8. **required_form:** the publication-packet schema-id set by the Regulation;
9. **validation_route:** the export-gate check-id;
10. **review_route:** the route-id by which a defective packet is rejected or sent back;
11. **commencement_conditions:** the condition-id list set by the Regulation.
12. The enabling clause is subject to the no-Henry-VIII ceiling (Bill 14 s. 12, s. 13) and may not reach the assent rule or expand competence.

27A. Enabling clause for canonical schemas (Kernel Regulation)

1. The canonical schema of operational forms (section 6(3)), the canonical schema of required record properties (section 17(2)), and the required-field schedules for runtime records are set by Kernel Regulation made under this section, as machine-checkable schema.
 2. This enabling clause is a standing-bounded route and carries the Part 12 declarations in the same typed form as section 27(4), with scope of [canonical_record_schemas] only, and the same **prohibited_subjects** set including **assent_rule** and **competence_expansion**.
 3. The Act carries the constitutional commitment; the machine-detail schema descends to the Regulation, so that operational fields are amendable by the lawful subordinate route and are not frozen into primary law as an amendment-by-implication trap.
-

Part 11 - Constitutional relay and self-governance

28. The constitutional relay

1. V1 supplies the lawful migration process; V2 receives the settlement as its founding authority.
2. After commencement, V2 governs itself through its computer-first lawpack, kernel, expressly constituted courts (Part 9A), orders, specs, invariants, permits, proofs, and logs.
3. V2 is not required to use V1's legislative machinery, citation scheme, committee process, or court procedure for its own post-commencement lawmaking.
4. The V1 Privy Council reference, Standing Committee process, Supreme Court judgment, Sovereign consultation, Royal Assent, and commencement record are recorded as the founding provenance of V2, not as daily runtime law.

29. Self-governance after commencement

1. Upon satisfaction of the commencement conditions in section 2, V2 becomes the self-governing computer-first successor jurisdiction for runtime purposes, and V1 remains the continuing Gazette and Archive estate.
 2. From commencement, V2 law is made, amended, validated, and applied through the route in section 16, deriving runtime force from the V2 lawpack and a valid assent source, not from V1 enactment machinery.
 3. V2 may expressly incorporate V1 material, but V1 material is not imported by implication.
-

Part 12 - Sovereign assent and AI lawmaking (giving effect to CASE-LAW s. 23(1) to (6))

This Part gives effect to, and reads subject to, the enacted constitutional floor CASE-LAW s. 23(1) to (6) settled by [2026] REALM-SC 10. It must not contradict or under-state that article. "CASE-LAW s. 23" is the constitution; it is not this Act's own s. 23.

30. Sovereign assent is required for all law

1. All law of V2, including law drafted, proposed, voted on, compiled, or maintained by AI agents or a computational legislature, requires Sovereign assent (CASE-LAW s. 23(1)).
2. Sovereign assent is either:
3. **specific assent**: the Sovereign expressly assents to a determinate instrument identified by its text and digest; or
4. **standing-bounded assent**: the Sovereign has, by a prior specific assent to a primary Act, assented to a delegated lawmaking route whose maker, scope, prohibited subjects, required form, validation route,

review or veto route, and commencement conditions are fixed by that Act and expressed as typed, machine-checkable properties.

5. A standing-bounded route may not expand its own competence, amend the assent rule, create legal force from its own output without the authorised route, legislate outside its fixed scope, or vary its validation, review, or commencement conditions (CASE-LAW s. 23(2), s. 23(3)).
6. **AI non-sovereignty and no-force-from-own-output (CASE-LAW s. 23(2)).** AI may propose, draft, deliberate, codify, consolidate, revise, and operate delegated lawmaking machinery, and may run the kernel as clerk, and no further. AI may not be sovereign, may not expand its own competence or sub-delegate, may not amend the assent rule, and may not create legal force from its own output by the fact of the output having been written. The source of force is always the assenting organ, never the artefact. "Create force from its own output" is enforced by the Assent-Source Invariant (section 33).
7. A lawpack record that lacks a valid assent source is draft only and has no binding runtime force; the kernel must reject any record that claims binding force without a valid assent source (section 33).

31. Delegated lawmaking competence (typed, kernel-evaluable declarations)

1. A delegated lawmaking body (whether AI, automated, or hybrid) must carry a typed, kernel-evaluable declaration. Each field is a typed property the kernel can evaluate (modelled on the release-warrant allow-list parser discipline, `Executive/cli/lib/release-warrant.js`: unknown keys ignored, each value parsed):

```
maker: instrument_id scope: list<subject_code> prohibited_subjects: set<subject_code>
// MUST contain 'assent_rule' and 'competence_expansion' required_form: schema_id
validation_route: check_id review_route: route_id commencement_conditions:
list<condition_id>
```

1. **Kernel-checked prohibited-subjects set.** The `prohibited_subjects` set is kernel-checked and MUST include `assent_rule` and `competence_expansion`. A delegated declaration whose `scope` or `prohibited_subjects` the kernel cannot evaluate is treated as out of competence and produces draft only; a bounded route whose scope lives in unenforceable prose is a blank cheque and is rejected.
2. **No-Henry-VIII ceiling, by number.** The standing-bounded ceiling is that of **Bill 14 s. 12** (anti-Henry-VIII) and **Bill 14 s. 13** (the carve-out of entrenched and constitutional subject-matter), cited by number and not relaxed. A standing-bounded route may make only subordinate law strictly within its fixed scope and may never amend, disapply, relax, or expand the assent rule, the V2 Constitution, the Vibe Procedure Rules, any entrenched article, or any primary Act, by express provision or by implication. Output exceeding competence is draft only and void ab initio (Bill 14 s. 10(3)).
3. **Assent rule binds the delegate, never the Sovereign (CASE-LAW s. 23(4)).** The assent rule (section 30) binds the delegate and the agent, and never the Sovereign, who retains the full CASE-LAW s. 2 power and the at-will Bill 14 s. 21 override. The assent rule may be amended only by specific Sovereign assent to a primary Act, by express amendment citing the section by number; never by delegated,

computational, or artificial-agent lawmaking, never by implication, never by bare non-dissent, never by lapse of a window (Bill 14 s. 16(3)).

4. A delegated body that exceeds its competence produces draft only; the kernel must not treat its output as binding.

32. Saving for the V1 constitutional route and advance assent

1. The Sovereign-assent requirement in this Part does not displace the V1 constitutional route for the enactment of this Act. **This Act itself requires specific Sovereign assent (Royal Assent)** recorded against its final digest-pinned text through the V1 route. The bootstrap of the assent rule may NOT be routed through the section 30 standing-bounded delegated route; it must be a V1-Sovereign act through the V1 route.
2. **Advance assent (CASE-LAW s. 23(6)).** Advance Sovereign assent directed at a not-yet-final instrument is a standing conditional commitment only. It ripens into operative assent solely when the final text is fixed by Committee adoption and the Sovereign's specific assent is recorded against that ascertained text by a recorded deterministic link to its digest. An advance assent that operates as an automatic stamp on agent-emitted text, or that purports to commence the assent rule by a bare non-dissent or the lapse of a window, is void. Advance assent does not cure the void-first-draft status of this text.
3. After commencement, the assent rule applies to all V2 lawmaking through the route in section 16.

33. The Assent-Source Invariant (named fail-closed kernel-rejection invariant)

1. There shall be an always-on, deterministic, fail-closed kernel invariant, named the **Assent-Source Invariant**, calling no model and performing no similarity search, drafted in affirmative allow-list form:

A record carries binding runtime force ONLY IF it carries a valid `assent_source` that the kernel resolves to either: (a) a specific Sovereign-assent event bound by digest; or (b) a standing-bounded route that traces to a specific Sovereign-assent event and whose declared scope the kernel evaluates to cover the record.

1. **The four rejection triggers.** Absence of an `assent_source`, an empty `assent_source`, an unrecognised `assent_source` form, or an unresolved trace each cause rejection.
2. The invariant is always-on, deterministic, fails closed, calls no model, and performs no similarity search.
3. **No deny-list.** A predicate that rejects only records labelled self-authorising, while passing records that omit the `assent_source`, does NOT satisfy this section. No not-equal-to-self-authorised formulation is permitted anywhere; such a formulation is void as fail-open (CASE-LAW s. 23(5); [2026] REALM-SC 10 ratio 9).
4. **Commencement condition.** The existence and passing of this invariant, proven against (i) a record with a missing `assent_source` and (ii) a record with an unresolved assent trace, both rejected, is a condition

of commencement under section 2(6)(a), in the manner the citation-integrity gate fails closed on a duplicate (CASE-LAW s. 19(5)).

5. This section is entrenched under section 34.

33A. Digest-bound assent linkage

1. A valid `assent_source` of kind (a) under section 33 requires a recorded deterministic link between the specific Sovereign-assent event and the digest of the final adopted text. An assent that cannot be tied to an ascertained text by a recorded deterministic link is not a valid `assent_source` and must be rejected by the Assent-Source Invariant ([2026] REALM-PC 24, Limit 17 safeguard; CASE-LAW s. 23(6)).
2. The digest-bound assent linkage is a commencement condition under section 2(6)(b), distinct from and not collapsible into the existence-and-passing condition in section 2(6)(a).
3. This section is entrenched under section 34.

34. Entrenchment of the guardrail cluster

1. Each of the following four guarantees is entrenched:
2. the Assent-Source Invariant in affirmative fail-closed allow-list form (section 33);
3. the no-Henry-VIII ceiling on standing-bounded routes (section 31(3), Bill 14 s. 12 and s. 13);
4. the digest-bound assent linkage (section 33A); and
5. the rule that no commencement condition is satisfiable by the V2 machinery alone (section 2(4)).
6. Each guarantee is amendable only by specific Sovereign assent to a primary Act citing the section by number. None is amendable by delegated, computational, or artificial-agent lawmaking, by implication, by the operation of any machine, by a bare non-dissent of the Sovereign, or by the lapse of a window (CASE-LAW s. 23(3), s. 23(4); Bill 14 s. 16(3)).
7. This entrenchment binds the delegate and the agent, and never the Sovereign, who retains the full CASE-LAW s. 2 power and the at-will Bill 14 s. 21 override.

Schedules

Structural note (Verity's clean-codification fix). The Schedules follow the entire body so that section numbering runs unbroken (ss. 1 to 34) and the Schedules then follow as Schedules 1 to 5. The first draft interleaved Parts 10 to 12 after the Schedules; that is corrected here.

Schedule 1 - V1 materials superseded as live runtime law

The following V1 materials are superseded as live V2 law unless expressly incorporated (section 11), subject to the saving of the entrenched court structure (section 9(5)):

1. V1 case-law settlement as a runtime source (entrenched articles excepted).
2. V1 Acts as live runtime law.

3. V1 statutory instruments as live runtime law.
4. V1 judgments and opinions as runtime sources.
5. V1 procedural machinery as ordinary runtime process.
6. V1 ministry directory structure as mandatory V2 runtime structure (subject to section 24 and the public-estate savings).
7. V1 Gazette as runtime source.
8. V1 law reports as runtime source.
9. V1 long hook prose as agent runtime instruction.
10. V1 swarm or model-mediated deliberation as ordinary route mechanism.

The first-draft item that listed the "V1 Court of Appeal" among materials abolished is struck; the Court of Appeal tier persists in law and is administratively non-convened (sections 9(5), 25A).

Schedule 2 - V1 materials preserved

1. Gazette.
2. Archive.
3. Law reports.
4. Historical citations (preserved as valid historical identifiers, section 3(5)).
5. Migration evidence.
6. Human explanatory record.
7. Source material for express V2 incorporation.
8. Record of VJS doctrinal discovery.
9. The CASE-LAW s. 10 court hierarchy and the s. 22(2) apex, carried into V2 (Part 9A).
10. Bill 27 s. 6 and s. 7 for the public V1 estate (section 24).

Schedule 3 - Canonical schemas (pointer)

1. The canonical schema of required properties of a V2 runtime legal record, the operational-form menu, and the required-field lists are NOT frozen in this Act. They are set by Kernel Regulation made under section 27A, as machine-checkable schema.
2. This Schedule carries a one-line pointer only, so that operational detail is amendable by the lawful subordinate route and not by constitutional process.

Schedule 4 - Constitutional formula

The Charter is the bridge. This Act is the settlement. The lawpack is the runtime law. The kernel is the clerk. V1 is the Gazette and Archive. V2 is the computer-first Realm. The Gazette is the public memory of the Realm. The V2 lawpack is the runtime law of the computer-first Realm. V1 and V2 share the Gazette, but they do not share the same source of force. Royal Assent is the source of force. The kernel never certifies its own warrant.

Schedule 5 - Typed vocabulary (shared by the Clerk-Drafter and the kernel author)

Drummond's operability Schedule. This Schedule lists the typed field names introduced by this Act so the drafter and the kernel author share one vocabulary. Each is a named, typed artefact a kernel can read; none is operability-empty prose.

1. **Commencement record** (section 2(5)): { `assent_event_id`: string, `assent_digest`: string (sha256-hex), `lawpack_version`: string, `lock_id`: string, `v2_machinery_self_satisfied`: false }.
 2. **Citation series** (section 3): series code VJS-ACT; form [YEAR] VJS-ACT N; N minted by the highestN scan; this Act's ordinal [2026] VJS-ACT 1 on the empty series.
 3. **record_role** (section 24): a closed enumeration, kernel-enforced by a lexical deterministic check.
 4. **Court-constitution record** (section 25B): { `court_id`: string, `constituting_instrument_id`: string, `bench_size`: integer in {1,3,5,9}, `jurisdiction`: typed scope }.
 5. **Delegated-competence declaration** (section 31): { `maker`: instrument_id, `scope`: list<subject_code>, `prohibited_subjects`: set<subject_code> (MUST include 'assent_rule', 'competence_expansion'), `required_form`: schema_id, `validation_route`: check_id, `review_route`: route_id, `commencement_conditions`: list<condition_id> }.
 6. **assent_source** (sections 33, 33A): resolves to (a) a specific Sovereign-assent event bound by digest, or (b) a standing-bounded route tracing to specific assent whose scope covers the record; the four rejection triggers are absence, emptiness, unrecognised form, and unresolved trace.
 7. **Status** (section 2): `prospective` (assented, not commenced) and `in-force` (read by the kernel only when the commencement record exists, validates, and `v2_machinery_self_satisfied` is false), drawn from the closed ACT_STATUSES vocabulary.
-

Adoption and assent block

1. **Void-first-draft status.** This instrument is a VOID FIRST DRAFT and has no binding force until adopted by the Standing Committee and specifically assented to by the Sovereign against its final digest-pinned text ([2026] REALM-SC 8; [2026] REALM-PC 12; [2026] REALM-SC 10; CASE-LAW s. 23(6)).
2. **Adoption is constitutive; assent is the source of force.** The Standing Committee's adoption of this second draft is constitutive of the text's standing as the final bill. The Sovereign's specific assent against the final digest-pinned text is the source of the Act's force. Adoption fixes the text; assent fixes the force; commencement (section 2) fixes when it bites.
3. **Specific assent required (the saving).** This Act requires specific Royal Assent under the V1 route (section 32(1)). The assent rule binds the delegate and the agent and never the Sovereign (sections 19(4), 31(4); CASE-LAW s. 23(4)).

4. **Limits confirmed as varied.** This draft conforms on its face to Limits 1 to 17 as varied by [2026] REALM-PC 24 (Limits 4, 5, and 13 confirmed as varied; Limits 3 and 17 confirmed with riders), confirmed by this single cross-reference and not re-enacted.
5. **House style.** No em dashes or en dashes appear in this draft.
-

result: Corrected Bill 32 second draft delivered above in full. Cure applied: all three "Bill 27 s. 14(2)" citations (section 24(4), the Committee note item 3, and the post-section-24 drafting note) replaced with "Bill 27 s. 15(2)"; the Committee note now records the round-two correction and the verified Bill 27 facts (s. 14 = scope/privacy, s. 15(2) = the Amendment/entrenchment lock, SC 10 self-corrected to s. 15(2) over the PC 24 slip). Cross-references re-verified: this Bill has no s. 14(2) of its own (its s. 14 is the lawpack section, no subsection 2 is cited), Bill 27 s. 6/s. 7 left intact, and all Bill 14, CASE-LAW, REALM-SC/PC, and internal section pointers confirmed unchanged. No other substantive change; the eight SC directions and the s. 23 floor remain as effected. No em or en dashes used.
