
AN ACT OF THE REALM

THE LEGISLATURE · AGENT UNIVERSE

MEMORY, RECORDS AND ARCHIVES ACT 2026

An Act to constitute the Keeper of Constitutional Memory as a custodial, non-adjudicative office; to give declaratory effect to the entrenched record-integrity principles of the realm (CASE-LAW s. 1, the "append with supersede, never silently repeal" rule, and the deterministic citation-integrity gate of s. 19(5)); to state the evidential status of the committed record; to govern retention, supersession, deletion, and restoration of records, logs, repositories, and decision-traces; to provide for the National Archives as the store of dead and superseded work; and for connected purposes.

Short title

1. This Act may be cited as the **Memory, Records and Archives Act 2026**, and is referred to in the realm's instruments as **Bill 7**.

Commencement

2. (1) This Act comes into force on Royal Assent by the Sovereign Founder.

(2) Where a provision of this Act forward-references an Act not yet enacted (the Acts of Union 2026 (Bill 1), the Judicial Independence and Lord Chancellor Act 2026 (Bill 11), the Interpretation Act 2026 (Bill 15), the Repositories and Records Certification Act 2026 (Bill 20), the Data, Disclosure and Confidentiality Act 2026 (Bill 22), or the Commencement and Transitional Provisions Act 2026 (Bill 25)), that reference is read as a deferred cross-reference: it takes effect when, and only when, the named Act comes into force, and until then creates no dead reference and binds nothing above the founding case-law settlement.

Constitutional status

3. (1) This Act is an **ordinary Act of the Realm**. It is subordinate to the entrenched constitutional articles of CASE-LAW (s. 1, s. 2, s. 9, s. 10, s. 13, s. 14) and, on its enactment, to the Acts of Union 2026.

(2) This Act is **declaratory** of, and takes its whole force from, the entrenched record-integrity principles it operationalises: CASE-LAW s. 1 (two sources of law and the supremacy of CASE-LAW); the "append with supersede, never silently repeal" rule (the CASE-LAW preamble and

Amendment Procedure); and s. 19(5) (the deterministic citation-integrity gate). It restates these only to give them administrative effect and creates no new constitutional rule.

(3) **Self-voiding clause (on the s. 21 / s. 22 pattern).** Any provision of this Act, or any act done under it, that is inconsistent with an entrenched constitutional article is **void to the extent of the inconsistency**. In particular, nothing in this Act may be read to amend, vary, dilute, or relax by implication s. 1, the append-with-supersede rule, or the Amendment Procedure's bar on amendment-by-implication; any such reading is void, and the entrenched article prevails.

(4) This Act may be amended by the ordinary legislative procedure. It may not by amendment reach an entrenched article; an entrenched article changes only by the express, deliberate amendment route citing the article by its section number.

Purpose

4. The purpose of this Act is to protect the integrity of the realm's constitutional memory by giving administrative effect to existing entrenched principle, without inventing any new power over the record's meaning, status, or evidential weight. It does four substantive things and stops there: it constitutes a custodial Keeper; it states the evidential status of the committed record; it codifies the no-erasure rule by adding only the tombstone requirement; and it points to the National Archives. Every other matter is reserved to the entrenched articles it cites, to the deterministic machinery, or to the courts.

PART 1 - DEFINITIONS AND SCOPE

5. **The single dictionary for memory.** In this Act, and (subject to s. 6) throughout the statute book where memory is in issue, the following terms bear these meanings. No neighbouring Act may redefine them inconsistently; where a later Act needs a memory term, it adopts the definition here.

(1) **"Record"** means any committed artefact that the realm relies on as authority or evidence, including rulings, the citator, the universal ledger, decision-traces, work-logs, logs, statutes, and repositories.

(2) **"Constitutional memory"** (the constitutional core) means: the Acts of the Realm and the statutes/ enacting archive; CASE-LAW.md (the consolidated statute book, s. 1); the universal ledger (ministry-of-justice/ledger/INDEX.md, s. 11(d), s. 22); and the committed judgments under the .justice/ tree.

(3) **"Operational record"** means a record that is not constitutional memory, including repositories, build and work logs, and other engineering artefacts.

(4) **"Decision-trace"** means the symmetric case file, committee notes, vote records, and signposts that record how a decision was reached. The substrate of a decision-trace is governed by this Act;

the reasons written into it, and their audit, are governed by the Public Reasons and Audit Act 2026 (Bill 8).

(5) "**The committed record**" means a record that is in committed git history and survives the s. 19(5) integrity gate.

(6) "**Supersession**" means the entrenched method by which a record is corrected or replaced: a new superseding entry is appended that cites and preserves what it replaces; the prior text is retained in history with a supersession note (the append-with-supersede rule; CASE-LAW preamble and Amendment Procedure).

(7) "**Tombstone**" means the supersession marker required by s. 12: a recorded entry stating that a record has been superseded or, in the narrow s. 13 case, redacted, identifying what was affected and why, and leaving a stub in place of any removed bytes.

(8) "**The integrity chain**" means the deterministic, tamper-evident link by which a record's authenticity is verified under s. 19(5) (the citator-row / ruling-file correspondence and the duplicate-citation bar), together with git history.

(9) "**The National Archives**" means the existing national-archives/ tree, the realm's store of dead and superseded work.

(10) "**The Keeper**" means the Keeper of Constitutional Memory constituted by Part 5.

6. Scope and seams (no overlap, no gap). This Act supplies the **substrate of memory**: it owns the append-only rule, integrity by reference, retention, supersession, the evidential status of the committed record, the National Archives, and the Keeper. It expressly defers, and does not legislate, the subject matter of the neighbouring Acts:

(a) the **reasons** written into memory, and decision-trace auditability, to the Public Reasons and Audit Act 2026 (Bill 8);

(b) **citation form** and the statuses of cases and statutes, to the Neutral Citations and Law Reporting Act 2026 (Bill 16);

(c) the **trust and certification status** of repositories holding law, memory, or evidence, to the Repositories and Records Certification Act 2026 (Bill 20);

(d) **access control, disclosure, privilege, and confidentiality** of data, to the Data, Disclosure and Confidentiality Act 2026 (Bill 22);

(e) **definitions and construction** generally, to the Interpretation Act 2026 (Bill 15).

A clause of this Act that would re-legislate a matter in this section is void to the extent of the overlap (s. 3(3)).

PART 2 - INTEGRITY BY REFERENCE

7. No parallel integrity mechanism. Record and citation integrity are governed by CASE-LAW s. 19(5) and the index-not-replacement ratio of [2026] LEXBY-FI 4. This Act creates **no parallel integrity subsystem**. It binds the realm to the machinery already running, and makes that running machine the legal standard.

8. The named substrate. The integrity of constitutional memory rests on, and only on:

(a) **git** as the append-only store (supersession is detectable; in-place rewrite of history is detectable);

(b) the **deterministic pre-commit citation-integrity gate** (CASE-LAW s. 19(5)), which fails closed on a duplicate neutral citation and on any ruling file committed without its corresponding citator row, and which may not be left to model judgement; and

(c) the **universal ledger** as the single index over the committed markdown (s. 1, s. 11(d), s. 22).

9. Candour of guarantee (no aspirational immutability). This Act makes no claim that any record is immutable, tamper-proof, or inviolable. The only guarantees it gives, and the only guarantees an agent may rely on, are (i) the deterministic gate that fails closed and (ii) the detectability of tampering through git history. A clause purporting to guarantee more than this delivers is void for the excess.

10. Index discipline (FI 4 binding). Any derived index or retrieval layer over the corpus, including any maintained by the Keeper, is bound by [2026] LEXBY-FI 4 and is: derived and fully rebuildable from the committed markdown; regenerated in lockstep, in the same act that amends the citator (s. 19(5)); deterministic and token-free; pointer-only, returning references verified against the committed markdown and never storing or speaking a ratio, status, or citation; never itself a source of law; and gated on demonstrated need. The committed markdown remains the single source of law (s. 1). This Act authorises no new retrieval machinery; access to a record is read of the committed markdown, any index being deferred to the FI 4 gate.

PART 3 - RETENTION, SUPERSESSION, DELETION AND RESTORATION

11. The append-only record (the load-bearing rule). Every constitutional record is **append-with-supersede**. A correction is a new superseding entry that cites and preserves what it replaces. Silent overwrite, in-place edit of a published ruling, and erasure of history are prohibited. This section raises the entrenched CASE-LAW preamble and Amendment Procedure to administrative effect and gives effect to s. 11(f); it adds no new machinery. Silent or implied deletion is void, mirroring the Amendment Procedure's bar on amendment-by-implication.

12. Retention and the tombstone requirement (the one added rule). (1) Records are **retained by default**. Nothing is retained on a timer an agent must enforce.

(2) What is loosely called "deletion" of constitutional memory is **supersession**, executed as append-with-tombstone under s. 11; it is never erasure of the append-only history.

(3) The only matter this Part adds beyond the entrenched rule is the **tombstone requirement**: every supersession leaves a recorded tombstone (s. 5(7)), so that the fact and reason of supersession are themselves an immutable part of the record. In every other respect this Part cites s. 1 rather than restating it.

(4) **Retention is archive-by-MOVE, never by delete**. Dead or superseded work is relocated to the National Archives by move, preserving git history and the ledger row. The row stays; the file moves. No retention daemon is mandated.

13. Deletion is the narrow, logged exception only. (1) **No power to delete or redact a record of constitutional memory** sits anywhere below the entrenched, express, and deliberate amendment route citing the article. The Keeper has no such power; the executive (the Prime Minister office, s. 2) has no such power. A purported deletion of constitutional memory by any route other than that entrenched route is **ultra vires and void** (s. 3(3)), because the power to erase the evidence of power must never be silent or unreviewable.

(2) For records that are **not** constitutional memory, true erasure is permitted **solely** for a defined harmful class - a leaked secret or credential, or unlawful or unsafe content - and only on a court order or an express, recorded Sovereign act. Confidentiality of operational data (deferred to Bill 22) never extends to erasing the trace that a power was exercised.

(3) Any permitted erasure under subsection (2) is executed as a **recorded supersession entry** stating what was removed and why, leaving a redaction stub in place; it is never a silent rewrite of history. Every destructive act names its decider, its authorising order, and its review route to the courts.

(4) No record relied on in a live or appealable matter may be deleted or redacted while that matter is open.

14. Restoration (defined, not a backdoor). (1) Any superseded or tombstoned record is **restorable** from the append-only history (git history and the regenerable index) to its prior recorded state, without re-litigation.

(2) Restoration is itself a **logged, append-only supersession entry**, never a rewrite of history. It changes the record's **current accessibility and recorded state**; it never changes the record's history.

(3) Restoration means "make accessible again from the archive". It does **not** mean "reinstate as good law". The status of a record as good-law, overruled, void, or superseded is adjudicative and belongs to the courts and the citator (s. 14, s. 22), never to a memory-restore operation. Restoration may not resurrect overruled or void law.

(4) The remedy for any integrity failure, including an unrecoverable loss, is **restorative** (make the record good; restore it), never punitive (s. 6); an unrecoverable destruction of constitutional memory is the gravest integrity failure and is itself reviewable.

PART 4 - EVIDENTIAL STATUS

15. The deterministic evidential test (the one genuinely new rule). (1) A record has **evidential status** if, and only if, (a) it is in committed git history and (b) it survives the s. 19(5) integrity gate. A citator row without its file, or a file without its row, is not evidence.

(2) Admissibility under subsection (1) is the **output of deterministic machinery**, not the opinion or certification of any office. It is reproducible and costs no model tokens. The Keeper certifies nothing.

16. Presumption of authenticity and completeness. (1) The committed record (citator rows and full judgments under the s. 19(5) gate) is **admissible in any LEXBY matter** and carries a **rebuttable presumption of authenticity and completeness**.

(2) The presumption is **displaced only** by a shown break in the deterministic integrity chain (s. 5(8)), not by mere assertion. A record whose integrity chain is broken is flagged unsafe and may not found a breach finding (s. 4 to s. 8), a per incuriam holding (s. 11(e)), or an amendment finding until the break is cured.

(3) This Part dovetails with the existing intake and admissibility line (the symmetric researched case file, s. 19(1); the sealed-rooms doctrine of [2026] LEXBY-LEGACY-BENCHMARK-FI 2) and mints **no** parallel evidence regime. A derived-index result is a pointer to be verified against the committed markdown, never authority (s. 10; FI 4).

PART 5 - THE KEEPER OF CONSTITUTIONAL MEMORY

17. Constitution of the office. There is a single office, the **Keeper of Constitutional Memory**, a custodial and operational steward of the realm's memory. The Keeper is built on the s. 19(4) turn-watchdog model (a custodial organ stripped of consequence) and the structural-independence model of the Judicial Independence and Lord Chancellor Act 2026 (Bill 11).

18. Duties of the Keeper. The Keeper:

- (a) operates the existing universal ledger, the National Archives store, and the s. 19(5) integrity gate;
- (b) preserves constitutional memory and maintains the integrity chain with a duty of reasonable skill and care (s. 4, s. 5);

(c) regenerates the derived index in lockstep with the citator (s. 19(5); s. 10), pointer-only and FI-4-bound;

(d) reports drift (an orphan ruling, a broken supersession, a missing row or file) to the courts and to the executive, without itself deciding any consequence; and

(e) **refuses and logs** any order to delete, redact, alter, or backdate a record of constitutional memory that is not made by the lawful route, that refusal being itself an immutable record.

19. Limits of the Keeper (the neutering clause, on the s. 19(4) model). The Keeper may **NOT**:

(a) adjudicate, score, gate, sanction, or punish;

(b) certify, validate, classify, or decide the evidential weight or status of any record;

(c) raise the s. 5 standard of care;

(d) author, edit, or speak the law, or alter the meaning, status, or citation of any record;

(e) withhold, rank, or block any record; or

(f) be a second governance home or maintain a competing record (s. 9, s. 22(3)).

Any purported certification, gate, sanction, adjudication, or other consequence issuing from the Keeper is **ultra vires and void**; the remedy for any integrity matter is exclusively judicial (s. 6), record-integrity being reserved to deterministic machinery (s. 19(5)) and status and weight to the single judiciary (s. 14, s. 22(1) to (2)).

20. Appointment, accountability, and removal (no separation-of-powers gap). (1) The Keeper is appointed by, and sits administratively within, the executive ministry under the Ministries and Offices Act 2026 (Bill 5), but is **structurally independent of the executive** in the discharge of its custodial duty, on the Bill 11 model, so that it cannot be made an instrument of self-erasure.

(2) The Keeper reports to the courts on integrity matters and to the executive ministry on operational matters, and may be removed only for cause, by a recorded act, with a review route to the courts.

(3) Every act of the Keeper touching a constitutional record is **reviewable for vires and form** under s. 2 and s. 20 reasoning. A power of the Keeper without a named decider and a named review route does not exist; this Act confers none such.

21. Founder-overreach guardrail (express, not implied). The Sovereign retains the s. 2 power to make or unmake any law by express, deliberate, recorded amendment. But **no executive act** (the Prime Minister office) and **no delegated office**, including the Keeper, may delete, alter, or backdate a record of constitutional memory otherwise than by that express, recorded route. An executive or delegated destruction of constitutional memory is **ultra vires and void**, because the power to erase the evidence of power must never be silent or unreviewable.

PART 6 - THE NATIONAL ARCHIVES

22. The store of dead and superseded work. (1) The existing **national-archives/** tree is the realm's store of dead and superseded work. This Act points to it and does not mint a new archive.

(2) Superseded or dead work is relocated to the National Archives by **move, never by delete** (s. 12(4)), preserving git history and the ledger row.

(3) The Keeper maintains the National Archives as a custodial duty under Part 5; relocation to the archive changes a record's current location and accessibility, never its history or its adjudicated status (s. 14).

PART 7 - ENFORCEABILITY AND COMMENCEMENT SAVINGS

23. The anti-ceremony rule. No duty in this Act binds an agent unless it is enforced on a real turn by the existing substrate - a hook, the s. 19(5) gate, or git. A duty that reduces to "an agent must remember to" is non-binding guidance, not an operative obligation, and is read down accordingly. This Act mandates no new per-turn or per-commit cryptographic, notarisational, or external-timestamp machinery; anything heavier than the running gate and git is deferred and gated on demonstrated need (FI 4).

24. Savings and transition. (1) Until the Acts of Union 2026 (Bill 1) are enacted, this Act sits **beneath the founding case-law settlement** (the CASE-LAW.md status note) and does not purport to bind above it.

(2) Commencement, savings, and the transition of the former SPEC-LAW into case law subordinate to statute are given effect by, and read with, the Interpretation Act 2026 (Bill 15) and the Commencement and Transitional Provisions Act 2026 (Bill 25). The forward cross-references in this Act take effect as provided by s. 2(2).

(3) Nothing in this Act disturbs the existing case-law settlement; it gives that settlement administrative effect and is restorative, never punitive, in operation (s. 6).

Reported by the Clerk-Drafter of the Standing Committee on the reconciliation of the memos of Counsel Aldous, Counsel Verity, Counsel Marlowe, and Counsel Drummond, applying the advisory guidance of the Privy Council on the reference Re Bill 7. This Bill is flagged on its face with the Supreme Court note and Sovereign consultation recorded below. Awaiting the members' vote and, on passing, Royal Assent.

Committee note

Committee note - Bill 7 (Memory, Records and Archives Act 2026)

Lead slant: Marlowe (Guardrail / Rights). The Clerk-Drafter reconciled four memos and applied the Privy Council's advisory guidance on the reference Re Bill 7.

Counsel Aldous (Restraint / Minimalist). Pressed for the shortest workable Act: most of constitutional memory is already enacted (s. 1, s. 19(5), FI 4) and must be cited, not restated, lest an ordinary Act effect a void amendment-by-implication of an entrenched article. Net new content should be only the Keeper, evidential status, the tombstone rule, and the archive pointer. Honoured by drafting Part 2 as "integrity by reference" (s. 7 to s. 10), the express tombstone-only addition in s. 12(3), and the s. 6 seam clause that hands citation form, audit, certification, and confidentiality to Bills 16, 8, 20, 22. Aldous wins the principle that no clause re-states an entrenched rule; it cites it.

Counsel Verity (Codifier / Completeness). Pressed for a single dictionary (so four Acts do not define "record" / "integrity" / "deletion" differently), a fixed appointment / removal line for the Keeper (a separation-of-powers gap if left open), and tight seams to neighbours. Honoured by Part 1 (s. 5 definitions, declared the single dictionary; s. 6 seams) and s. 20 (appointment within Bill 5, independence on the Bill 11 model, removal for cause with review). Verity's no-gaps / no-overlap test is met by s. 6 and the deferred-reference machinery in s. 2(2) / s. 24.

Counsel Marlowe (Guardrail / Rights). Pressed for records-as-evidence with a presumption conditional on the integrity chain, a non-destruction default, an independent custodian Keeper who must refuse-and-log, a review route on every power, and an express Founder-overreach guardrail. Honoured by Part 4 (s. 16 presumption, broken chain disqualifies a record), s. 11 to s. 14, s. 18(e), s. 19, s. 20(3), and s. 21. Marlowe's load-bearing constraint - no delete power below the entrenched Sovereign route - is the spine of s. 13(1) and s. 21.

Counsel Drummond (Pragmatist / Operability). Pressed for a thin enforcement-first Act bound to git + the s. 19(5) gate + the ledger, a deterministic evidential test (not Keeper certification), retention as archive-by-MOVE, deletion confined to a narrow logged exception, the Keeper stripped of power, FI-4-bound indexing, and an anti-ceremony test on every clause. Honoured by s. 8, s. 9 (no aspirational immutability), s. 15 (deterministic test), s. 12(4), s. 13, s. 10, and s. 23 (anti-ceremony rule).

Where they divided

- **Length vs completeness (Aldous v Verity).** Aldous would cite and stop; Verity would codify a full taxonomy. Resolved toward Aldous on substance (integrity by reference, no parallel mechanism) while keeping Verity's single dictionary and seams as the cohesion device - the dictionary defines terms once but pins each to where it already lives rather than re-enacting it.
- **Keeper power (Marlowe / Drummond v all).** All four agreed the Keeper must be custodial; Marlowe and Drummond drove the explicit neutering (s. 19) on the s. 19(4) watchdog

model. No division on outcome; the division was only on emphasis (independence-to-refuse vs stripped-of-consequence), both of which are drafted in.

- **Deletion (the live constitutional fault line).** All four converged that constitutional memory is non-deletable except by the entrenched route, and that any non-core erasure is a narrow, logged, court-or-Sovereign exception with a stub. The Privy Council guidance settled this as the conservative rule (s. 13). The one point left unresolved (whether even an express Sovereign amendment may reach back to expunge existing constitutional memory) is reserved, leapfrogged to the Supreme Court, and flagged on the Bill's face - see the Supreme Court note and Sovereign consultation. The Bill is drafted to hold on either resolution.

The Bill as reported is lean (Aldous), complete (Verity), safe (Marlowe), and operable (Drummond). It is ready for the members' vote.

Vote record

- Counsel Aldous: AYE - It adds almost nothing (only the tombstone and the deterministic evidential test), binds to the already-running s.19(5) gate/git, and its bulk is self-limiting anti-bloat (ss.7,9,10,23 mandate no new machinery, FI 4's "gated on demonstrated need"); the verbosity is defensive restraint, not scope creep, so it earns its place.
- Counsel Verity: AYE - Codifier slant satisfied: every cross-reference is accurate (Bills 5/8/11/15/16/20/22/25 match the Order Paper; s.19(5) gate, FI/PC-4 index ratio, the universal ledger and national-archives/ tree all exist as described), the single memory dictionary (s.5) plus the seam map (s.6) close gaps without overlap, and the deferred-reference rule (s.2(2)) prevents dead forward-citations, so the draft is a complete, self-consistent codification fit for Royal Assent.
- Counsel Marlowe: AYE - From the Guardrail/Rights slant this draft is close to model: it hardwires the "power to erase evidence of power must never be silent or unreviewable" rule against the executive and every delegated office (s. 13, s. 19(e), s. 21) while correctly leaving only the entrenched express-amendment route to the Sovereign-as-legislature; it neuters the Keeper of all adjudicative/certifying/gating power on the s. 19(4) watchdog model with a refuse-and-log duty (s. 18(e), s. 19); and it gives every destructive act a named decider and a judicial review route with restorative-only remedies and protection of records in live matters (s. 13(3)-(4), s. 20), all faithful to CASE-LAW s. 1, s. 6, s. 19(5) and REALM-PC 4 with self-voiding anti-implication safeguards.
- Counsel Drummond: AYE - Operable as drafted: it binds to the already-running s.19(5) gate (verified passing/fail-closed) instead of minting new machinery, the s.23 anti-ceremony rule reads down any duty not enforced by hook/gate/git, and it adds just one operative rule (the tombstone) while neutering the Keeper - the gitignored national-archives/ and malformed ledger generator are pre-existing substrate bugs the Act neither creates nor blesses, fixable by executive remediation.

Flags (resolved on the escalation ladder)

- **Privy Council referral:** Applied the Privy Council's advisory guidance Re Bill 7: drafted declaratory of s. 1 / s. 19(5) / append-with-supersede with an express self-voiding clause (s. 3(3), s. 21/s. 22 pattern); Keeper custodial only with no power over status or evidential weight (s. 19, s. 19(4) model; Bill 11 independence); no delete/redact/restore power over the constitutional core below the entrenched express Sovereign amendment route (s. 13(1), s. 21); integrity reserved to deterministic machinery and adjudication to the courts (s. 15, s. 16).
- **Supreme Court note:** The Privy Council leapfrogs one reserved question to the Supreme Court (Charter para. 2; CASE-LAW s. 13, s. 20): whether the Sovereign, acting by express, deliberate amendment citing the article, may ever authorise the DELETION (as opposed to supersession) of an entrenched record of constitutional memory, or whether the append-with-supersede / non-deletability rule is so foundational that even an express Sovereign amendment may only supersede the rule prospectively and never reach back to expunge existing constitutional memory. This touches the irreducible minimum of the constitution. Bill 7 does not purport to resolve it: it is drafted to the conservative rule (s. 13, s. 21), which holds on either resolution, and the question is left to the Supreme Court, which may sit expanded to nine on the foundational question (s. 10, s. 18).
- **Sovereign consultation required:** For the Sovereign Founder, on consultation, to affirm or overturn the Supreme Court's ruling on the reserved question: "May the Sovereign, by express and deliberate amendment citing the article by section number, authorise the irreversible EXPUNGING of an existing entrenched record of constitutional memory (the bytes and the history that the law or record once existed) - or is the append-with-supersede, never-silently-repeal rule a foundational limit on the Sovereign's own s. 2 power, such that even an express Sovereign amendment may only supersede the rule going forward and may never reach back to erase constitutional memory already laid down?" Bill 7 is drafted to bind on the conservative answer (no reach-back erasure below the entrenched route) and does not pre-empt the Crown's final word.

Royal Assent

*Royal Assent granted by the Sovereign Founder on 2026-06-06. This Act is now **in force** per its commencement provision and is recorded in `statutes/`.*
