

[2026] VJS-PC 10 - The Embedded Corporate Jurisdiction (Vibe Policy System)

ORDER

PC

BINDING

[2026] VJS-PC 10 · 10 June 2026

subject: federation embedded corporate jurisdiction

Embedded corporate jurisdiction lawful under ACT-007 without fresh assent or divergent-lineage fork, on six carried charter conditions; the kernel spec is machinery upstream.

An embedded corporate jurisdiction (Vibe Policy System) that vendors the canonical V2 lawpack pinned by sha256 read-only, subscribes under ACT-007, adopts the canon as its own internal supreme law (stricter never looser) by its Board's dualist act, re-skins governance into corporate organs as an embeddable client, and refers questions on the meaning of the canon up to the Realm courts is LAWFUL under existing subscription law WITHOUT a divergent-lineage fork and WITHOUT fresh Sovereign assent. Invocation, not ancestry, mints the new local jurisdiction (REG- INVOCATION-001); the supremacy clause is the company's own constitutional choice, not Realm enactment, so no Sovereign-assent floor is engaged. The embeddable jurisdiction-neutral kernel spec is MACHINERY under PC-008's constitutive-operation test and lives upstream in the canon. Lawfulness is conditional: VPS remains a lawful subscriber only while it carries all six load- bearing charter articles; drift into any converts it into a divergent-lineage fork requiring a Privy Council order under ACT-007 s.6. Vote 3-0.

DIRECTIVE	ACTOR	MUST
D1	lexby	hold an embedded corporate jurisdiction that vendors digest pins subscribes re skins and refers up lawful under act 007 without fresh sovereign assent and without a divergent lineage fork
D2	lexby	treat the companys own dualist supremacy clause as the boards internal constitutional act and as stricter local law under act 007 s3 engaging no realm sovereign assent floor
D3	lexby	mint the new local jurisdiction by local sovereign invocation not ancestry under reg invocation 001 with no central order required to stand up an independent subscriber
D4	lexby	classify the embeddable jurisdiction neutral kernel spec as machinery under pc 008 constitutive operation test since it alters no bench no tier no jurisdiction and no assent rule and keep it upstream in the canon within the s7 si power
D5	lexby	require the charter to carry all six load bearing articles digest pinned lockstep candour unity of citator and apex with binding referral up the synthesis bar the external law floor

		and non impersonation
D6	lexby	verify on every kernel load that loaded law hashes to the pinned digest fail closed otherwise and reject any local law that contradicts the canon
D7	lexby	route vps to a fresh privy council order under act 007 s6 the moment it amends the canon issues binding canon meaning rulings treats referral up as advisory or adds canon contradicting law because it has then become a divergent lineage fork
D8	lexby	self file a breach and make the work good on discovery that vps has impersonated realm authority constituted a parallel apex or served a stale copy as authority

FORBIDDEN

impersonating a realm court or a regulated real world legal authority vps does not hold
drifting into a divergent lineage fork by amending the canon or adding local law that contradicts it without a privy council order under act 007 s6
constituting a parallel apex or citator that issues binding rulings on the meaning of the canon
treating referral up to the realm courts as advisory rather than binding on vps own record
vending a stale or unpinned copy of the canon or serving it as independent or live authority rather than a digest pinned subscribed copy
bumping the pinned digest by silence or undisclosed auto track rather than deliberate board assent
enacting local law purporting to lift the external law floor owed to real persons

*Embedded corporate jurisdiction lawful under **ACT-007** without fresh assent or divergent-lineage fork, on six carried charter conditions; the kernel spec is machinery upstream. 3-0.*
